

How To Measure For Your Boat Name

Take a photo straight on and centered with the back of your boat. If you want your boat name on the port and starboard sides, take a photo of the sides. Make sure your images are straight on and include all of the boat in the frame (if possible). Now your boat may not look like this boat pictured here but find any elements in the same depth of field as where the name is going so we have a point of reference. The above pink lines identify where we measured the distance between 2 points. It helps us to size your image 100% to scale. When we print your name, it will fit exactly as what we proof to you in our designs.

Email that photo with included measurements to paul@perduevision.com
